Premium multi-directional lighting system provides high performance illumination using performance parts PIR triggered or timed control. Equipment in this range is designed to match your location needs.

## [Video LINK](#)

Multi directional solar lighting system designed to be off until required using PIR detection controls. Dusk until dawn operation.

We can offer luminaries with autodetect background light @ 30% until triggered by pedestrians to 100% value. This then provides maximum illumination until out of sensor range. Will then revert to 30% until triggered again.

Dragons Breath Solar if required can offer a bespoke solar powered lighting service manufactured and designed to match customer's specifications across the UK.
